

ATTAQ.AI

Built for the AI era. Made in the EU.

Continuous Attack Path Analysis

for Elastic Security™ and OpenSearch™

PRIORITIZE WHAT MATTERS

IN PARTNERSHIP WITH

ElastiFlow

By integrating topology with a behavioral overlay of actual traffic, ATTAQ.AI bridges the visibility gap for OpenSearch™ and Elasticsearch™ users. Security and development teams can accelerate prioritization by analyzing blast radius, critical asset attack paths, and the security consequences of configuration updates across identities, network, applications, and infrastructure.

YOUR ASYMMETRIC DISADVANTAGE

The attacker pays once. You pay forever.

COST ASYMMETRY

AI has given attackers nation-state capabilities at commodity prices.

KNOWLEDGE ASYMMETRY

The attacker knows exactly one thing — their attack path. You must know everything.

TIME ASYMMETRY

Attackers operate at machine speed; a SOC drowning in alerts operates at human-triage speed.

THE ATTAQ.AI ANSWER

Faster insights through Security Graph.

Instant Topology Map

Map what can go wrong if something is reached — in minutes, agentless.

Behavioral Overlay

See whether someone is actually traversing a path right now.

Blast Radius Analysis

If something is compromised, what could be reached next?

Paths to Crown Jewels

Understand every path to your most valuable assets.

Timeline Analysis

Measure the impact of configuration changes on security posture.

SEE IT, DON'T INFER IT

Uncover potential attack paths faster.

- Potential attack paths, before they are exploited
- Graph representation of relations and paths between entities
- Observed activity and signals overlaid on topology
- Proximity to crown jewels for risk-based prioritization
- Timeline view for retrospective analysis

PROTECT YOUR INVESTMENT

Seamless integration with your existing environment.

- ✓ Reuses existing Elastic™ and OpenSearch™ deployments — no rip and replace
- ✓ Agentless topology map in minutes
- ✓ Behavioural overlay through data planes
- ✓ Designed for humans and agents

See your attack paths in minutes.
